PERFORMANCE BULLETIN 102

V42 Series Cast Iron Valve Casting Updates

The Cast Iron V42 series valve bodies are being updated to new tooling. While the key dimensional characteristics will stay unchanged, you will notice new AQ Matic branding. The fit, form, and function of the parts will remain unaffected and the new valves will be fully interchangeable with the old. These changes are being made to update branding, reduce variation, and streamline the supply chain. The new castings will be supplied from within the USA and will continue to be machined and assembled in the USA.

These changes will affect both the valve body and cap castings on all sizes and will be rolled out as existing inventory is exhausted.
