

AQUAMATIC® METAL DIAPHRAGM VALVES

VERSATILE DESIGN FOR A WIDE VARIETY OF APPLICATIONS

FEATURES/BENEFITS

The unique Y-pattern design with large seat opening and high lift disc permits higher flow rates at lower pressure loss than other comparable valves

Larger diaphragm area compared to seat area permits drip-tight closing without any springs

All components can be serviced while the valve is in-line

Separate flow and control chambers permit positive closing without springs

Adaptable to a wide variety of control devices

Pre-formed, stress-relieved diaphragm minimizes fatigue, maximizes valve responsiveness and diaphragm lifetime Cast iron, brass, stainless steel and nitrile elastomer components, for an unparalleled service

Diaphragm acts as an actuator, eliminating the need for electric or pneumatic actuators, which minimizes initial investment and maintenance costs

3/4"- 3" threaded [NPT or BSP]

3"- 4" flange drilled in accordance with ASA16.1 class 125, or BSP4504

Handles liquid and gases

PRINCIPLES OF OPERATION

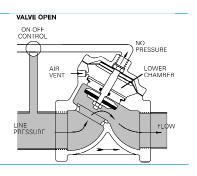

DRIP-TIGHT CLOSING

Closure is obtained by directing line pressure or equivalent independent pressure into the upper chamber. This pressure on the large diaphragm area causes thevalvedisctoseal against the seat.

FULL OPEN OPERATION

When the closing pressure in the upper chamberis relieved by venting the pilot line, the valve opens positively, by line pressure on the disc.
