

FLOW CHART FOR COMPRESSIBLE FLUIDS Through AquaMatic Diaphragm Valves

Example shown (dotted line) for determining the pressure drop through Series 426: 2" Diaphragm Valve with inlet Pressure at 100 psig and air flow rate of 2345. Answer 5 psi pressure drop.

The data shown on this chart is based on Cv factors obtained from testing production valves and are intended as a guide in valve selection only. Performance may vary.
